

Conducting a Gap Assessment in Hyperproof

Leveraging Existing Requirements and Controls to Jumpstart Your Next Program

Hyperproof is a robust, all-in-one compliance operations platform that allows organizations to stay on top of all their security assurance and compliance work. With Hyperproof, organizations can not only identify compliance requirements, implement controls, and collect and store proof, they can also analyze existing controls and requirements to determine which program they should start next.

Compliance gap assessments help organizations measure their existing controls and requirements against those in another compliance framework. This is both useful and necessary because many organizations need to be in compliance with multiple frameworks. Hyperproof makes it easy for organizations to conduct a gap assessment in just four simple steps:

1. **Setting up custom fields on requirements.** Custom fields help organizations determine which requirements have been started, not started, and reviewed.
2. **Creating a new program and then "jumpstarting" it.** Hyperproof's jumpstart feature gets organizations from Point A to Point B as quickly as possible by providing a snapshot of which existing requirements can be utilized in other frameworks.
3. **Reviewing the new program and identifying the gaps.** This involves reviewing each requirement individually and then assessing whether the requirement is sufficient or if further action is needed.
4. **Generating a report** that details all of the information analyzed during the gap assessment.

The following guide walks you through a typical gap assessment using Hyperproof.

Conducting a Gap Assessment in Hyperproof

Leveraging Existing Requirements and Controls to Jumpstart Your Next Program

Step	Who	Overview	How to in Hyperproof
CUSTOM FIELDS			
Setting Up Custom Fields on Requirements	Admin/ Manager	Custom fields on requirements help you determine which requirements are in progress, not yet started, and reviewed. Additionally, you can add a custom field for notes so you and your team can stay connected and up-to-date. You'll create two custom fields: one for the requirement status and one for notes.	1. From the left navigation menu, select <i>Settings</i>, and then select <i>Custom fields</i>. 2. Click New. 3. Below <i>Select field type</i>, select <i>Single select</i>. 4. Below <i>Field name</i>, enter <i>Gap assessment status</i>. 5. Below <i>Available on</i>, select the <i>Requirements</i> check box. 6. Select a symbol from the <i>Field symbol</i> drop-down menu. 7. Below <i>Required field?</i>, select the Yes radio button. 8. Below <i>Values</i>, enter the following three options: Not started, In progress, and Reviewed. 9. Click Create. 10. Repeat steps 2 - 7 with the following modifications: For step 3, select <i>Multi-line text field</i>. For step 4, enter <i>Gap assessment notes</i>. After step 7, click Create.

Step	Who	Overview	How to in Hyperproof
CREATING A NEW PROGRAM			
Creating a New Program	Admin/ Manager	Before determining which existing controls and requirements can be reused, you must first create a new program.	1. From the left navigation menu, select <i>Programs</i>, and then click New. 2. Select a program template from the template library. 3. Click Review. 4. Optionally, expand the sections to review the program's requirements. 5. Click Use this template. Important: DO NOT select the <i>Include controls</i> check box! 6. Enter a name and description for your program, and then click Create program. 7. Click Finish.
Jumpstarting the New Program	Admin/ Manager	Hyperproof's jumpstart feature weighs existing requirements in your organization against the requirements of a new program. The jumpstart percentage is determined by how many existing requirements can be reused in the new program. When you choose to jumpstart from one program to another, you're indicating that you want to link the controls from the related requirements in your existing program to the related requirements in the new program.	1. From the left navigation menu, select <i>Programs</i>, and then select the program you just created. 2. Select the ... (<i>More options</i>) tab, and then click Jumpstart. 3. Locate the program with the related requirements that you want to reuse, and then toggle on that program. 4. Click Next, and then click Confirm.

Step	Who	Overview	How to in Hyperproof
IDENTIFYING GAPS			
Reviewing Requirements	Admin/ Manager	The manual process of reviewing requirements is pivotal in determining whether a requirement is sufficient, or if it needs further action.	1. From the left navigation menu, select <i>Programs</i>, and then select the program you just created. 2. Select the <i>Requirements</i> tab. 3. Click the Tree view icon in the upper-right corner. 4. Expand a section, and then select a requirement. On the right side of the screen, you'll see three tabs: <i>Controls</i>, <i>Proof</i>, and <i>Details</i>. From the <i>Controls</i> tab, you can view controls that were linked during the jumpstart process. Mouse over the control to access a quick or detailed overview of the control.
Managing Controls	Admin/ Manager	During the review process, you need to indicate if new controls need to be created or if existing ones need to be modified or unlinked from a requirement. Tip: Use the <i>Gap assessment status</i> custom field on requirements to keep track of the review process.	1. If a control needs to be modified or created, select the <i>Details</i> tab. Add information about what needs to be done in the <i>Gap assessment notes</i> section. Tip: Use the same text to describe work that needs to be done so that it's easy to filter the report. For example, you might use something like "Update control CC1.2. Details: The existing control needs..." or "New controls. Details: There is a gap that requires..." 2. To unlink the control from the requirement, mouse over the control and then click the Unlink (X) icon.

REPORTING			
Generating the Report	Admin/ Manager	After the gap assessment is completed, you'll generate a report in CSV format that details all of the information in the gap assessment.	1. From the left navigation menu, select <i>Programs</i>, and then select your program. 2. Select the ... (<i>More options</i>) tab, and then click Export program. The program is exported to a CSV file. Click the Download button in the bottom-right corner to download the file now, or check your email to download later.
